

Male Infertility

Male Infertility is common, treatable, and rarely discussed.

No matter where you are in your journey towards conception, it is important to take the step of getting a male assessment.

The process is easy: a Male Fertility Assessment includes a semen analysis and a consultation with a male fertility specialist. From there, we will make expert recommendations on your next steps.

Did You know? Infertility occurs equally between both males and females. If you and your partner are trying to conceive, it's important to be aware of male infertility factors that elevate your risk and how they can affect your chances of successful conception.

Kindman Coverage (effective 1/1/2026)

- Abnormal Semen Analysis Follow-up Consult, includes male hormone panel and DNA fragmentation testing
- IUI Diagnostic Workup (Epigenetic Sperm Quality Testing + Results Consult) to determine if IUI is the most appropriate treatment plan
- Testicular Sperm Extraction (TESE) and Percutaneous Epididymal Sperm Aspiration (PESA) procedures

Note: Kindman provides coverage for services otherwise not covered under your medical plan (initial semen analysis is covered under your medical plan)
